

Projects Summary — David Manh, Senior Technical Program Manager

David is a Senior TPM at Expedia Group with a track record of leading high-visibility, cross-functional programs at the intersection of Marketing, Data Engineering, and Product & Technology. He is consistently the sole program manager representing multiple marketing channel teams to the broader org — coordinating SEM, SEO, Metasearch, Affiliates, and Data Engineering in parallel. His programs range from \$44M–\$50M GP opportunity launches to foundational data infrastructure that powers EG's marketing decision-making.

1. OTA on HCOM — Hotels.com Full OTA Launch

Duration: Jan–Oct 2024 | **Initiative:** MP-1384

David was the **sole Marketing Program Manager** representing all MCT channel teams (SEM, SEO, Metasearch, Affiliates, Display, Channel Operations, MDE) for the expansion of Hotels.com from a lodging-only brand into a full OTA selling Cars, Activities, Ground Transportation, and Air across 12+ global markets.

- **\$50M annualized GP opportunity** (marketing-channel portion: \$44M). Coordinated 9 teams across 4 lines of business with 20+ cross-functional alignment sessions, 10 Confluence pages owned, and a phased launch across US, UK, FR, BR, AU, CA, MX, KR, JP, TR, TW, and HK.
- Drove contract amendments with metasearch partners (Kayak, Skyscanner), resolved a critical cookie routing risk from a prior failed launch, and managed SEO brand differentiation and SEM campaign architecture from strategy through live activation.

2. VrBex — Vrbo on BEX Modernization

Duration: Jun 2022–Feb 2024 | **Initiatives:** MP-570, MP-819, MP-605

David was the sole marketing representative for Vrbo's migration from its legacy platform onto the BEX (Expedia) platform — coordinating all marketing data, attribution, and partner channel workstreams across a phased global rollout.

- Delivered **19 marketing milestones** including 6 web releases (M7.1–M8 across 20+ markets), 2 native app releases, and 4 partner CPS migrations (Kayak, Trivago, TripAdvisor, Partnerize) with zero missed monthly reconciliation files across a compressed 18-month timeline.
- Sole Marketing Program Manager representing Meta, SEO, SEM, EWS, and Attribution teams to the P&T-led VrBex program — the earliest and longest example of David's P&T/Marketing bridge role at EG.

3. Bounce Rate Traffic Program

Duration: 2023–2026 (ongoing) | **Jira:** KTM epics, MP initiatives

David owns the Bounce Rate program — EG's CTO Scorecard initiative to recover gross profit lost to high bounce rates across EG brand landing pages.

- **\$3.7M GP recovery in H1 2024** and **\$4.6M in H2 2024** tracked against David-managed milestones. He owns the program Confluence status page (58+ version history) and drives bi-weekly reporting to CTO Scorecard and product leadership.
- Coordinates a multi-pod delivery team (Entry Clicks, Traffic Funnel, SEO, Landing Pages) and challenged the program's target methodology at the CTO Scorecard level — proposing a "goldilocks zone" reframe of bounce rate as a non-binary performance metric.

4. Metasearch Data Engineering

Duration: 2021–2025 | **Teams:** MDE Meta, EGDP, EWS

David led multiple concurrent programs within EG's Metasearch Data Engineering org, each with a distinct engineering scope and cross-partner coordination requirement.

CPC → CPS Commission Model Migration: Migrated EG's metasearch billing model from cost-per-click to cost-per-stay across Kayak, Trivago, Google, and TripAdvisor — a foundational change to how EG pays metasearch partners. David drove MATE adoption, partner SFTP setup, and CPS reconciliation pipeline delivery.

Partner SFTP & Onboarding: Coordinated 8 simultaneous partner SFTP migrations off the Chandler legacy system to AWS in Feb 2023 with zero missed monthly CPS reconciliation files. Managed Bing API failures, Partnerize HCOM VR contractual reconciliation risk, and Liligo partner launch in parallel.

EGDP Spend Migration (Hadoop → AWS): Led the migration of EG's marketing spend data infrastructure from on-premise Hadoop to the EGDP cloud platform, navigating HCOM Data Prod Exit deadlines, Marketing Island Phase 2 DataProc blockers, and partner CNRQ approval dependencies.

Skyscanner Travel Rankings Streaming: Coordinated the real-time streaming data pipeline for Skyscanner (with engineer Can Liu) — enabling EG's first streaming integration with a major metasearch affiliate. Managed partner IP/endpoint onboarding, OSP migration, schema enhancements for Search Participation, and a \$610K/year ancillary fee bug resolution.

5. AI Campaign Management Platform (ACMI)

Duration: 2024–2026 (ongoing) | **Initiative:** MDEAI project

David is the TPM for EG's AI-native campaign management platform — a cross-org initiative spanning SEM, Meta, and App channels to automate bid strategy, root-cause analysis, and budget optimization through agentic AI.

- Drove engineering delivery of the SPP (Spend Performance Platform) agent, reducing root-cause analysis latency from 25 minutes to 15 minutes and resolving 25+ bugs in a single quarter. The platform is on track for autonomous campaign management across SEM Branded and Meta by end-2026.
- Coordinated across SPOT, MTT, MDE, and a 15-person engineering org, managing sprint grooming, program reporting, and stakeholder alignment from concept through production.

6. Traffic Funnel Dataset

Duration: 2024–2026 | **Initiative:** EGTRAFFIC, MP-1809

David led the program to build EG's cross-channel Traffic Funnel Dataset — a unified data platform enabling traffic measurement from marketing channel entry through booking conversion.

- Defined requirements with a 30+ stakeholder working group, authored the Traffic Funnel Workshop Outcome page, created EGTRAFFIC-1 and EGTRAFFIC-2 as the canonical program tracking tickets, and drove the go/funneldb dashboard to replace the CTO Scorecard deck.
- Managed a 3-team delivery structure (Godzilla, Pulse, Entry Clicks) through ambiguous scope definition, aligning 12 MP initiatives across the program roadmap with formal risk tracking at the program level.

7. Destination Images Coverage

Duration: 2023–2024 | **Milestone:** MLSTN1-1743

David was the TPM for EG's AI-powered destination image recognition and coverage improvement program — part of the broader SEO Clawback initiative to recover GP lost to poor landing page visual quality.

- Program delivered **\$4.36M total GP** impact (David's coordination portion: ~\$300K). He managed the ML pipeline delivery, image quality scoring rollout, and cross-team integration across SEO, Image Engineering, and Analytics.
- Coordinated the AI recognition pipeline across a multi-team org with no direct engineering reports, driving milestone delivery through structured alignment and Jira tracking.

Additional Projects

SEM Data Engineering

Duration: 2019–2022 | **Tickets:** EGSEMMAS-3801, MLSTN1-4057

David built and managed EG's SEM data engineering program — the data infrastructure underpinning all SEM spend reporting, bid optimization, and finance reconciliation across EG brands.

- Managed the full arc from EDE (Expedia Data Engineering) through DAPS (Data Analytics Platform and Systems) to MDE (Marketing Data Engineering) — one of the longest continuous data program arcs in EG's marketing org. Delivered QlikView-to-Tableau migration, Bing API provisioning, and SEM spend pipeline for Google, Bing, and TripAdvisor.
 - Foundation for the ACMI platform — Anshul Kumar (SEM Product Lead) can attest to the full EDE→DAPS→MDE program impact across this entire arc.
-

SMT Operational Excellence (SMT OpEx)

Duration: 2025–2026 | **Jira:** SMTOPEx project

David participated in and drove MDE's contribution to the cross-org SMT Operational Excellence working group — a program to standardize engineering KPIs, delivery metrics (DORA), and reporting practices across the Shared Marketing Technology org.

- Designed the SMTOPEx custom Jira field schema (EITPO-28148), reported 7 COE tickets, built MDE's monthly OpEx reporting in LinearB, and authored 12 Confluence pages including the MDE SMT OpEx program page, standardized KPI definitions, and the Automation Status Tracker.
 - Coordinated across Rohit Kamath (program lead), Divya, Sasha, Neeraj, Serena, and Tijo; escalated LinearB scripting vs. manual reporting tradeoff directly to Rohit and drove resolution.
-

Cruise on White Label Template (Odysseus)

Duration: Sep 2024–Apr 2025 | **Confluence:** pages/422029206, pages/422018250

David was the MDE Program Status owner and marketing attribution POC for EG's migration of its Cruise OTA business to Odysseus — a third-party White Label Template platform. The Lean WLT launched Nov 6, 2024 (Black Friday/Wave season); Full WLT targeted Q2 2025.

- Authored the MDE Data Blackout Impact Assessment — documenting the loss of EG Commerce booking events during Lean WLT and the downstream implications for MATE, Godzilla, traffic/funnel/CVR KPIs, and all marketing channels. Drove KPI redefinition and booking backfill coordination.
 - Co-POC with Sasha Schofer for marketing tracking/attribution across a massively cross-divisional program; delivered formal program close Apr 4, 2025 with documented BAU handoffs. CVR uplifts: +22%, +33%, +38% YoY across launch milestones.
-

Cloud Reporting Pipeline

Duration: 2020–2022 | **Ticket:** MDEMETA-1117

David led the migration of EG's marketing analytics reporting infrastructure from Qubole/Presto to the cloud — enabling Tableau Cloud + Starburst as the new self-serve analytics layer for the marketing org.

- Built the Search and Sort Reporting Suite on Qubole/Presto and authored the L1 Ops Onboarding runbook for teams transitioning to Tableau Cloud + Starburst — the canonical operational reference for the platform migration.
 - Pre-Glean era project; laid the data infrastructure foundation that subsequent programs (SEM DE, ACMI) built on.
-

Entry Clicks Data Engineering

Duration: 2024–2026 | **Jira:** EGTRAFFIC / MP

David was embedded TPM for the Entry Clicks engineering team — the data pipeline team responsible for click-level traffic measurement that feeds the Traffic Funnel Dataset. He authored Confluence pages, coordinated schema dependencies with MATE Taxonomy (v4 freeze critical path), and drove Entry Clicks' sprint delivery commitments across the Q2 2025 Traffic Funnel program.

- Coordinated the MATE taxonomy v4 schema freeze as the hard precondition for Entry Clicks pipeline build, enabling the combined Pulse + Entry Clicks release to land before Q2 close.
- Active across #mde-entry-clicks, #mde-traffic-funnel-program, and #eg-traffic-funnel-dataset-stakeholders Slack channels; authored the workstream tracking pages consumed by the full Traffic Funnel program.

MATE Attribution Migration

Duration: 2022–2024 | **Cross-program:** CPC→CPS, VrBex, OTA on HCOM

MATE (Marketing Attribution Technology Engine) is EG's core attribution platform — the single source of truth for how marketing spend is attributed to bookings across all EG brands. David was the TPM coordinating MATE's migration across three concurrent programs (Metasearch CPC→CPS, VrBex, and OTA on HCOM) over 24 months with 12 engineers across 5 time zones.

- Required MATE table updates across 7 TSU + 10 BUP tables, validated with 3 brand UAT teams (Kayak, Trivago, Google/TripAdvisor), and delivered formal xFT sign-off February 9, 2024.
- Work is distributed across CPC→CPS, VrBex, and OTA on HCOM project folders — consolidated here for attribution program visibility as a standalone cross-cutting workstream.

Business Reviews (MDE)

Duration: 2021–2025 | **Team:** MDE Program / Metasearch

David ran the cadence, deck production, and communications for the Metasearch Data Engineering bi-weekly Business Review — the primary reporting mechanism from MDE program to marketing leadership.

- Produced and maintained bi-weekly status updates tracking program health, risk logs, and milestone delivery across the full MDE portfolio for senior stakeholder consumption.
- Coordinated across the MDE program team and channel engineering leads; surfaced program-level risks to leadership before they appeared in escalations.
