

Projects Summary — David Manh, Senior Technical Program Manager

Senior TPM at Expedia Group with a track record of leading high-visibility, cross-functional programs at the intersection of Marketing, Data Engineering, and Product & Technology. Consistently the sole program manager bridging marketing channel teams and the broader engineering org — coordinating SEM, SEO, Metasearch, Affiliates, and Data Engineering in parallel. Programs range from \$44M–\$50M GP opportunity launches to foundational data infrastructure that powers EG's marketing decision-making.

1. AI Campaign Management Platform (ACMI)

TPM for EG's AI-native campaign management platform — a cross-org initiative spanning SEM, Meta, and App channels to automate bid strategy, root-cause analysis, and budget optimization through agentic AI.

- Drove engineering delivery of the SPP (Spend Performance Platform) agent, reducing agent latency by up to 2x and resolving 25 bugs in the platform's latest major release. The platform is on track for autonomous campaign management across SEM Branded and Meta by end-2026.
 - Coordinated across SPOT, MTT, MDE, and a ~10-person engineering org, managing sprint grooming, program reporting, and stakeholder alignment from concept through production.
-

2. Bounce Rate Traffic Program

Program owner for EG's CTO Scorecard initiative to recover gross profit lost to high bounce rates across EG brand landing pages.

- Delivered two GP recovery milestones totaling **~\$8M** in Dec 2025. Owns the program Confluence status page (58+ version history) and drives bi-weekly reporting to CTO Scorecard and product leadership.
 - Coordinates a multi-pod delivery team (Entry Clicks, Traffic Funnel, SEO, Landing Pages) and challenged the program's target methodology at the CTO Scorecard level — proposing a "goldilocks zone" reframe of bounce rate as a non-binary performance metric.
-

3. SMT Operational Excellence (SMT OpEx)

Led MDE's contribution to the cross-org SMT Operational Excellence working group — a program to standardize engineering KPIs, delivery metrics (DORA), and reporting practices across the Shared Marketing Technology org.

- Designed the SMTOPEx custom Jira field schema, reported 7 COE tickets, built MDE's monthly OpEx reporting in LinearB, and authored the MDE SMT OpEx program page and COE process guide in Confluence.
 - Coordinated across the program lead and cross-functional working group members; escalated the LinearB scripting vs. manual reporting tradeoff directly to the program lead and drove resolution.
-

4. Entry Clicks Data Engineering

Embedded TPM for the Entry Clicks engineering team — the data pipeline responsible for click-level traffic measurement feeding the Traffic Funnel Dataset. Authored Confluence pages, coordinated schema dependencies with MATE Taxonomy, and drove sprint delivery commitments across the Q2 2025 Traffic Funnel program.

- Coordinated the MATE taxonomy v4 schema freeze as the hard precondition for Entry Clicks pipeline build, enabling the combined Pulse + Entry Clicks release to land before Q2 close.
 - Active across the Entry Clicks, Traffic Funnel, and stakeholder Slack channels; authored workstream tracking pages consumed by the full Traffic Funnel program.
-

5. Traffic Funnel Dataset

Led the program to build EG's cross-channel Traffic Funnel Dataset — a unified data platform enabling traffic measurement from marketing channel entry through booking conversion.

- Defined requirements with a cross-functional stakeholder working group spanning 7+ teams, authored the Traffic Funnel Workshop Outcome page, and drove the go/funnel/db dashboard to replace the CTO Scorecard deck.
 - Managed a 3-team delivery structure (Godzilla, Pulse, Entry Clicks) through ambiguous scope definition, aligning 12 initiatives across the program roadmap with formal risk tracking at the program level.
-

6. Destination Images Coverage

TPM for EG's AI-powered destination image recognition and coverage improvement program — part of the broader SEO Clawback initiative to recover GP lost to poor landing page visual quality.

- Program delivered **~\$4M total GP** impact. Managed ML pipeline delivery, image quality scoring rollout, and cross-team integration across SEO, Image Engineering, and Analytics.
 - Coordinated the AI recognition pipeline across a multi-team org with no direct engineering reports, driving milestone delivery through structured alignment across three workstreams.
-

7. Business Reviews (MDE)

Ran the cadence, deck production, and communications for the Metasearch Data Engineering bi-weekly Business Review — the primary reporting mechanism from the MDE program to marketing leadership.

- Produced and maintained bi-weekly status updates tracking program health, risk logs, and milestone delivery across the full MDE portfolio for senior stakeholder consumption.
 - Coordinated across the MDE program team and channel engineering leads; surfaced program-level risks to leadership before they appeared in escalations.
-

8. Cruise on White Label Template (Odysseus)

MDE Program Status owner and marketing attribution POC for EG's migration of its Cruise OTA business to Odysseus — a third-party White Label Template platform. The Lean WLT launched Nov 6, 2024 (Black Friday/Wave season); Full WLT targeted Q2 2025.

- Authored the MDE Data Blackout Impact Assessment — documenting the loss of EG Commerce booking events during Lean WLT and the downstream implications for MATE, Godzilla, traffic/funnel/CVR KPIs, and all marketing channels. Drove KPI redefinition and booking backfill coordination.
 - Co-POC for marketing tracking/attribution across a massively cross-divisional program; delivered formal program close Apr 4, 2025 with documented BAU handoffs. CVR uplifts: +22%, +33%, +38% YoY across launch milestones.
-

9. OTA on HCOM — Hotels.com Full OTA Launch

Sole Marketing Program Manager representing all MCT channel teams (SEM, SEO, Metasearch, Affiliates, Display, Channel Operations, MDE) for the expansion of Hotels.com from a lodging-only brand into a full OTA selling Cars, Activities, Ground Transportation, and Air across 12+ global markets.

- **\$50M annualized GP opportunity** (marketing-channel portion: \$44M). Coordinated 9 teams across 4 lines of business with 20+ cross-functional alignment sessions, 10 Confluence pages owned, and a phased launch across US, UK, FR, BR, AU, CA, MX, KR, JP, TR, TW, and HK.
 - Drove contract amendments with metasearch partners (Kayak, Skyscanner), resolved a critical cookie routing risk from a prior failed launch, and managed SEO brand differentiation and SEM campaign architecture from strategy through live activation.
-

10. VrBex — Vrbo on BEX Modernization

Sole marketing representative for Vrbo's migration from its legacy platform onto the BEX (Expedia) platform — coordinating all marketing data, attribution, and partner channel workstreams across a phased global rollout.

- Delivered **19 marketing milestones** including 6 web releases (M7.1–M8 across 20+ markets), 2 native app releases, and 4 partner CPS migrations (Kayak, Trivago, TripAdvisor, Partnerize) with zero missed monthly reconciliation files across a 20-month program.
 - Represented Meta, SEO, SEM, EWS, and Attribution teams to the P&T-led VrBex program — the earliest and longest example of the P&T/Marketing bridge role at EG.
-

11. Metasearch Data Engineering

Led multiple concurrent programs within EG's Metasearch Data Engineering org, each with a distinct engineering scope and cross-partner coordination requirement.

Skyscanner Travel Rankings Streaming: Coordinated the real-time streaming data pipeline for Skyscanner — enabling EG's first streaming integration with a major metasearch affiliate. Managed partner IP/endpoint onboarding, OSP migration, schema enhancements for Search Participation, and a ~\$600K/year ancillary fee bug resolution.

Partner SFTP & Onboarding: Coordinated 8 simultaneous partner SFTP migrations off the Chandler legacy system to AWS in Feb 2023 with zero missed monthly CPS reconciliation files. Managed Bing API failures, Partnerize HCOM VR contractual reconciliation risk, and Liligo partner launch in parallel.

EGDP Spend Migration (Hadoop → AWS): Led the migration of EG's marketing spend data infrastructure from on-premise Hadoop to the EGDP cloud platform, navigating HCOM Data Prod Exit deadlines, Marketing Island Phase 2 DataProc blockers, and partner CNRQ approval dependencies.

CPC → CPS Commission Model Migration: Migrated EG's metasearch billing model from cost-per-click to cost-per-stay across Kayak, Trivago, Google, and TripAdvisor — a foundational change to how EG pays metasearch partners. Drove MATE adoption, partner SFTP setup, and CPS reconciliation pipeline delivery.

MATE Attribution Migration: Coordinated MATE's migration across three concurrent programs (CPC→CPS, VrBex, OTA on HCOM) over 24 months with 12 engineers across 5 time zones — requiring MATE table updates across 7 TSU + 10 BUP tables, validated with 3 brand UAT teams, and formal xFT sign-off February 9, 2024.

12. Cloud Reporting Pipeline

Built EG's marketing analytics reporting infrastructure as a BI engineer — delivering the Search and Sort Reporting Suite on Qubole/Presto, validating EG's first Presto SDK connector (adopted org-wide), and leading 12 BI developers through a SAP BusinessObjects platform migration.

- Served as EG's sole BI engineer partner to Qubole for connector validation across Tableau, SAP BusinessObjects, and Qlik — the connector became EG's org-wide standard and remained in active use through 2022.
 - Authored the L1 Ops Onboarding runbook for teams transitioning to Tableau Cloud + Starburst; laid the data infrastructure foundation that subsequent programs (SEM DE, ACMI) built on.
-

13. SEM Data Engineering

Built and managed EG's SEM data engineering program — the data infrastructure underpinning all SEM spend reporting, bid optimization, and finance reconciliation across EG brands.

- Managed the full arc from EDE (Expedia Data Engineering) through DAPS (Data Analytics Platform and Systems) to MDE (Marketing Data Engineering) — one of the longest continuous data program arcs in EG's marketing org. Delivered QlikView-to-Tableau migration, Bing API provisioning, and SEM spend pipeline for Google, Bing, and TripAdvisor.
- Foundation for the ACMI platform — the SEM Product Lead can attest to the full EDE→DAPS→MDE program impact across this entire arc.

Work Samples

Bounce Rate — Program Status Page (Confluence)

Primary program tracker, 58 versions, bi-weekly CTO Scorecard reporting.

Program Status Header

Field	Value
Delivery Status	ON TRACK — 2/5/2026 — A new operating model has been implemented for the Acquire and Activate delivery team. New outcomes established; pods are developing corresponding milestones and roadmaps. H1 milestones due end of February, H2 milestones due end of March.
Wins	Modernisation of SEM Packages Landing pages rolled out. 4% increase in Platform adoption, Bounce Rate improved by 5.5%, 16.3% increase in 7D RVR. Search Form Migration to shared UI for BEX LPs: 0.91% MSV uplift, -0.78% bounce rate uplift.
2026 Targets	EG = 34.0%, BEX = 33.2%, HCOM = 35.7%, VRBO = 34.3%

Milestone: Experience Highlights

Field	Detail
Goal	Experience highlights on DLPs for HCOM; Spotlights on PLPs for BEX (SEO and SEM)
Measure	Entry Clicks 3% uplift of PLPs
Status	COMPLETED — Dec 18, 2025
Result	CVR increase of 1.68%, driven primarily by mobile. Positive annualized GP uplift.

Milestone: Metasearch PPA

Field	Detail
Goal	Improve Bounce rate at 91% — increase CTR from PPA to SRP to PDP
Measure	CVR (from PPA) 0.2% AND CTR PPA to PDP from 62% to 65%
Status	AT RISK — Jan 8, 2026
Risk	Extended to end of February — external partner dependency (Google, Trivago) for core metasearch PDP modal on pinned SRP. Multiple TnLs running; MDE sized at needing 8 weeks of data.

OTA on HCOM — Marketing Program (Confluence)

Central program page establishing marketing ownership across 8 channel leads. 10 pages owned, 20+ alignment sessions.

Role Matrix

Role	Contact
Marketing Program Manager	David Manh
Meta Lead	[Channel Lead]
SEM Lead	[Channel Lead]
SEO Lead	[Channel Lead]
Paid Social Lead	[Channel Lead]
TEaL & CRM	[Channel Lead]
Affiliates	[Channel Lead]
Channel Operations Lead	[Channel Lead]

Workstream Pages

Page	Versions
OTA on HCOM — Marketing Program Status	v16
OTA on HCOM — Meeting Minutes	v43
OTA on HCOM — Marketing FAQs	v15
OTA on HCOM — Channel Workstreams	v26
OTA on HCOM — SEM Workstream	v47
OTA on HCOM — Meta Workstream	v44
OTA on HCOM — SEO Workstream	v31
OTA on HCOM — Marketing Landing Pages	v29

MDE Data Blackout Impact Assessment (Confluence)

Authored as the MDE attribution POC for EG's Cruise migration to Odysseus WLT. Served as the primary reference for all MDE teams during the blackout period (Nov 2024 – Q2 2025).

Background

Expedia's online Cruise business declined 70% since 2019 while the cruise industry expanded 20%. EG's TLT approved a time-boxed migration to Odysseus Cruise Solutions' White Label Template — with a Lean WLT targeting Black Friday 2024 (capturing 70% of EG's annual online cruise GBV) and a Full WLT in Q2 2025.

Brands in Scope

- expedia.com, expedia.ca, cheaptickets.com, orbitz.com, travelocity.com, expedia-aarp.com

Key Business Impacts

Impact Area	Detail
Booking Data	No booking data flowing into EG ecosystem until Full WLT launch. Manual reporting available from Odysseus.
KPI Redefinition	Traffic, funnel, and CVR metrics require redefinition post Lean WLT launch.
Commerce Events	No OMS/EG Commerce booking events during blackout. MATE, Godzilla, and all marketing channel KPIs affected.
Identity	One Key loyalty unavailable during blackout. Travelers cannot access cruise bookings from App or web.
Channels Impacted	SEM, Paid Online/Media, CRM

Delivery Conditions

- Travelers on EG brands can search and book Cruise inventory on the lean version of Odysseus WLT.
- EG Agents can provide customer service post-book using Odysseus Agent Tools.
- EG's existing ~15K Cruise bookings yet to sail are smoothly migrated to the Odysseus platform.
